Population-Based Analysis
using the
Population Health Navigator

MHS Portal Background

Population Health Navigator

- Tri-Service Pop Health IT Tiger Team
  - Met for seven months
  - Evaluated 10 tools
  - Recommended AF Population Health Portal
- TMA/Chief Medical Officer funded Portal
  - Navy and Army focus groups
    - AF PHSD in San Antonio
    - Established Service Implementation Plans

Population Health Navigator (PHN)

About PHN?

- Web-based information and report application.
- Provides Prevalence Lists and Action List for identified diseases/conditions
- Enables users to quickly identify patients' Clinical Preventive needs

Population Health Navigator (PHN)

Summarizes data from . . .

- M2
  - Standard Inpatient Data Record (SIDR)
  - Standard Ambulatory Data Record (SADR)
  - Health Care Service Reports (HCSR)
- Approximately 103 CHCS hosts
- Defense Eligibility Enrollment Registration System (DEERS)

Sensitive & “For Official Use O

Security Awareness

- Command approval for access to the PHN
- Complete Security Awareness Test on-line
- Must read and accept the Security Requirements prior to entering the site
- Output products that contain sensitive data are marked with privacy caveat

Population Health Navigator

Major “Index Card” Sections :

BREAST CANCER SCREENING

OVERVIEW: Breast cancer is the most common cancer and second leading cause of death in women. Although definitive breast cancer prevention is not possible, early detection improves a woman's prognosis. The U.S. Preventive Services Task Force recommends that women age 50 through 69 receive routine breast cancer screening 1 to 2 years with mammography. A review of screening effectiveness studies concludes that such screening can reduce breast cancer mortality by 20% to 30%.

In 1990, breast cancer resulted in $6.5 billion in medical care cost which is more than any other cancer. Reviews of the available cost-effectiveness studies report that mammography screening costs approximately $60,000 per year life gained.

Center for Disease Control (CDC), *An Ounce of Prevention, What are the Returns,* 2d edition October 1999

DIABETES CARE

OVERVIEW: Diabetes is a serious disease that affects over 16 million Americans, and over 150,000 people die from diabetes and its complications each year. Most of the morbidity and mortality of diabetes is due to the complications associated with the disease: blindness, kidney failure, nerve damage, and cardiovascular disease. Diabetic retinopathy is the leading cause of new blindness in people under 65; diabetic neuropathy is the second leading cause of lower extremity amputation with over 50,000 Americans annually losing a limb because of diabetes; diabetic macrovascular disease leads to accelerated coronary heart disease and peripheral vascular disease, both of which result in premature death.

Studies show that many, if not all, of the complications of diabetes can be slowed or even prevented by better management on the part of the health care team and the patient. Improved blood glucose control, regular eye examinations, and reduction in cholesterol and blood pressure, are some of the practices that have been unequivocally shown to reduce complications and thereby diminish the heavy personal and financial toll attributed to diabetes. -- *Diabetes Quality Improvement Project Initial Measure Set (Final Version) August 14, 1998*

AFMS POPULATION HEALTH BASED CRITICAL SUCCESS FACTORS

- # 1 Describe the demographics, needs, and health status of the enrolled population
- # 4 Manage Medical and disease conditions
- #5 Continually evaluate improvement in the population's health status and the delivery system's effectiveness and efficiency

POPULATION HEALTH IMPROVEMENT DESIRED END STATE

- Primary Care Optimization: Extends the scope of clinical performance measures and Each primary care team knows the health care needs of its enrollees, *Population Health Improvement-Priority Areas,* USAF/SG Policy Letter 00-002, 5 Apr 2000

METRIC DEFINITIONS:

- Percent of patients enrolled to Air Force MTFs with Type 1 and Type 2 diabetes ages 18 through 75 years who had a dilated eye exam, see numerator definition for time period.
- Percent of patients enrolled to Air Force MTFs with Type 1 and Type 2 diabetes ages 18 through 75 years who at least one HbA1c tests during the past year.
- Percent of patients enrolled to Air Force MTFs with Type 1 and Type 2 diabetes ages 18 through 75 years with HbA1c values >9.5% or no HbA1c test during the past year.

Exercise

Population Health Navigator

https://pophealth.afms.mil

- Look up your clinics data for the Clinical Metrics being used in the BUMED Business Plan
  - Breast Cancer Screening
  - HbA1c > 9.5
  - Diabetic LDL > 130
  - Asthma Medication
- Pull up Diabetes “Action List” in Excel

PopHealth Navigator Exercise

Choose Diabetes in a clinic of your choice**

- How many diabetics are HEDIS eligible?
- How many diabetics are on the action list?
  - What's the difference between these 2 groups? Percentage?
- What % of diabetics has:
  - No HbA1c?
  - HbA1c greater than 1 year?
  - HbA1c greater than 9.5? Less than 7.0?
  - Need retinopathy screening exams?
- What questions arise during this process?
  - What actions will need to be addressed or taken?

PopHealth Navigator Exercise

Choose Diabetes in a clinic of your choice

- What questions arise during this process?
  - In the group with no HbA1c? (coding issues)
  - In the group with HbA1c greater than 1 year? (enrollment issues)
  - In the group with HbA1c greater than 9.5? (process issues)

- What actions will need to be addressed or can be taken?
  - Use your healthcare TEAM!
  - Have staff call patients and order necessary exams/labs
  - Send out reminders to your patients
  - Consider referrals to case managers, pharmacy, nutrition
  - Demand forecast the need for services (Ophtho exams)
  - Case manage your high utilizers
  - Invite guest speakers (e.g. Podiatry).....
